1. Overview

The Investor's Ledger is a private AI-powered investment journal designed for individual investors who want to think more clearly about their decisions. It helps you:

- **Record** every trade and market thought before you act, with your emotion and reasoning captured at the moment of decision
- **Track** your portfolio positions with live market prices and P&L
- **Review** your week and month with structured reflection prompts
- **Consult** legendary investors — Peter Lynch, Warren Buffett, Charlie Munger, Ray Dalio, Howard Marks, and Benjamin Graham — as AI mentors who have read your entire journal

All data is stored **locally on your device** in a SQLite database. Nothing is uploaded to a server. The AI mentors use the DeepSeek API, which you configure with your own key.

2. Setup — Getting Started

Step 1: Get a DeepSeek API Key

1. Visit **platform.deepseek.com** and create a free account
2. Navigate to **API Keys** and generate a new key (starts with `sk-`)
3. Copy the key

Step 2: Configure the App

1. Open the app and tap the **gear icon (⚙️)** in the top-right corner of the Home screen
2. Paste your API key into the **DeepSeek API Key** field
3. Tap **保存 API Key** (Save API Key)
4. The status indicator changes from red **未配置** to green **已配置**

***Cost estimate:** Typical monthly usage runs \$1–3 USD. The app uses `deepseek-chat` for structured parsing and `deepseek-reasoner` (v3 Pro) for mentor responses, with server-side prefix caching to minimise repeated costs.*

3. Navigation Overview

The app has five main tabs at the bottom of the screen:

TAB	CHINESE	PURPOSE
Home	心法	Philosophy, rules, strategy report
Log	记录	Trade journal and thought notes
Holdings	持仓	Portfolio tracker with live prices
Review	复盘	Weekly notes and monthly deep review
Mentor	问道	AI mentor chat (per-master threads)

Settings are accessed via the **gear icon** on the Home screen.

4. 心法 · Home

The Home screen is your investing command centre — where you articulate your edge and monitor your consistency.

Investment Philosophy

Tap the philosophy line to edit your one-sentence personal investing principle. This is sent to the AI mentor as foundational context. Be specific: instead of "Buy good companies," try "Buy profitable, founder-led businesses at 15× earnings or less, with durable pricing power."

Tap **SAVE** to confirm or **CANCEL** to discard.

Rules

Your rules are personal guardrails — checklists you commit to checking before every trade.

- Tap **EDIT RULES** to enter edit mode
- Tap **+** to add a rule (maximum 5)
- Tap **×** next to a rule to delete it
- Tap **SAVE** when done

Rules appear as checkboxes in the trade form and are tracked for consistency in the strategy report.

***Tip:** Rules should be specific enough to be verifiable. "No stock over 25% of portfolio" is a rule. "Only buy quality stocks" is not.*

Default Mentor

Select which AI mentor you want as the default for the 问道 (Mentor) tab. This can be overridden at any time inside the Mentor screen. The "Your Mentor" (你的导师) option gives you a personalised assistant who speaks about your specific trades and patterns.

At a Glance Stats

Counts of your recorded data — Holdings, Trades, Thoughts, Weekly Notes, Monthly Reviews — displayed for quick reference.

Strategy Profile Report

Once you have at least **5 trade records**, tap 生成我的投资策略报告 (Generate Strategy Report) to produce an AI analysis of your actual behaviour. The report covers:

- What your real strategy looks like (vs. your stated philosophy)
- Emotional patterns and how they affect outcomes

- Which rules you follow vs. break most often
- Blind spots and suggested improvements

Tap **导出 PDF** to export and share the report. Tap **重新生成报告** to refresh with newer data.

Cost: Each report generation uses approximately \$0.05–0.10 of API credits.

5. 记录 · Log

The Log screen is where you build your investment journal. It has two sub-tabs:

- 交易计划 (Trade Plan) — structured trade records
- 心念 (Thoughts) — unstructured notes and questions

Trade Log — Creating a Trade

Tap 新建交易 (New Trade) to open the trade form. You have two input modes:

AI SMART INPUT (AI 智能输入)

Type or dictate a freeform description of your trade in natural language, for example:

"今天买了 200 股苹果，均价 175。服务收入增长好，股价回调 15%，估值合理。"

Tap AI 生成交易摘要 and the AI will extract the action, stock, reason, and emotion automatically. Review the populated form and save.

MANUAL INPUT (手动填写)

FIELD	DESCRIPTION
ACTION	Buy / Sell / Hold / Watch
STOCK	Search by ticker or company name (e.g., AAPL, 腾讯, BTC)
DISPLAY NAME	Optional custom label
DATE	Tap to open calendar picker; future dates show a calendar reminder option
REASON	Write your thesis <i>before</i> acting — why this stock, why now, what you expect
EMOTION	Calm / Confident / Neutral / Anxious / Fearful
RULES CHECK	Check off which of your rules you verified (if you have rules set)

Tap 写入交易日志 (Write to Journal) to save.

HOLDING UPDATE PROMPT

After a Buy or Sell, the app prompts you to update your Holdings. Fill in shares, price (for buys), and currency, then tap 确认更新持仓. Tap 跳过 to skip.

Trade Log — Viewing and Expanding Trades

Each trade row shows the date, action, stock, emotion, and a preview of your reason. Tap any row to expand it and see:

- Full reason text
- Rules you checked
- Original AI-parsed input (if smart mode was used)
- Mentor feedback already received
- Buttons to request new feedback from any mentor

REQUESTING MENTOR FEEDBACK

Tap **求教** [Mentor Name] (Ask [Mentor]) to get that mentor's take on the specific trade. The response streams in. You can request feedback from multiple mentors on the same trade.

CONTINUING IN MENTOR CHAT (带入问道)

Tap **继续** ↗ next to any mentor's feedback to carry that conversation into the full Mentor chat screen. The app automatically:

1. Saves the trade context and the mentor's feedback to that master's chat thread
2. Switches to the Mentor tab
3. Selects the correct master

Thought Log

Switch to the **心念** sub-tab for unstructured notes — market observations, questions you can't resolve, intuitions you want to examine.

Tap **记下心念** (Note a Thought) and write freely. Thoughts support the same mentor feedback workflow as trades.

6. 持仓 · Holdings

The Holdings screen tracks your open positions with live market data.

Adding a Position

Tap 新增持仓 and fill in:

FIELD	REQUIRED	NOTES
SYMBOL	Yes	Search by ticker or name
DISPLAY NAME	No	Shown instead of ticker if set
SHARES	Yes	Decimal values supported
COST	Yes	Average cost per share
CURRENCY	Yes	USD, CNY, HKD, SGD, EUR, JPY
BUY DATE	No	Used in mentor context
REASON TO BUY	No	Your original thesis — shared with mentor
NOTES	No	Stop levels, ideas, reminders

Tap 加入持仓 (Add to Holdings) to save.

Viewing Positions

Each holding row displays symbol, display name, shares held, cost basis, live price with today's change (green/red), market value, and unrealised P&L with percentage. The **TOTALS · 汇总** section aggregates by currency.

Live Price Updates

Tap 刷新 (Refresh) to fetch the latest prices from Yahoo Finance. The 更新于 timestamp shows how recently prices were fetched. Prices auto-refresh when the Mentor screen loads.

Editing and Deleting

Tap any holding row to enter edit mode. Tap 保存修改 (Save Changes) to confirm. To remove a position, tap 删除此持仓 and confirm twice.

带入问道 (Bring to Mentor)

Tap **带入问道** ↗ on any holding to start a mentor conversation about that specific position. The app pre-fills a message with your full position details and opens the Mentor tab automatically.

7. 复盘 · Review

The Review screen has two sub-tabs for structured reflection.

周记 · Weekly Notes

Write a brief weekly note covering what happened in the market, how you felt, and what you learned. Regular weekly reflection builds pattern recognition over time.

月评 · Monthly Review

A deeper monthly review prompt helps you assess your decision quality for the month — not just returns, but process. A banner on the Home screen reminds you when the month is ending and you have trades pending review.

8. 问道 · Mentor

The Mentor screen is a private chat with AI mentors who have read your entire investment journal.

Selecting a Mentor

OPTION	ENGLISH NAME	PHILOSOPHY
你的导师	Your Mentor	Personalised to your journal, trades, and patterns
彼得·林奇	Peter Lynch	Invest in what you know; GARP; simple businesses
巴菲特	Warren Buffett	Wonderful companies at fair prices; moats; long-term
芒格	Charlie Munger	Mental models; inversion; incentives; blunt and demanding
达利欧	Ray Dalio	Principles; economic cycles; diversification; stress-testing
霍华德·马克斯	Howard Marks	Second-level thinking; cycle awareness; risk vs. return
格雷厄姆	Benjamin Graham	Margin of safety; intrinsic value; quantitative discipline

Tap a mentor chip to switch. **Each mentor maintains a separate, independent conversation thread.**

Sending Messages

Type your question in the input field and tap the send button. Suggested starters when the chat is empty:

- "帮我看看最近几笔交易有什么规律？" (Help me spot patterns in my recent trades)
- "我焦虑的时候做的决定，结果通常怎样？" (What happens to decisions I make when anxious?)
- "我的哪条规则最容易被我自己违反？" (Which rule do I most often break?)
- "下个月我应该重点关注什么？" (What should I focus on next month?)

Copying Messages

Long-press any message bubble to copy its text to the clipboard. A brief **已复制** ✓ confirmation appears.

Retrying Failed Messages

If the AI is temporarily unreachable, an error appears with a **重新发送** (Retry) button. Tap it to retry without re-typing. No duplicate messages are created.

Resetting a Thread

Tap **RESET** in the top-right corner to clear the current master's conversation history. This only affects the selected master — other masters' threads are unaffected.

Live Price Sync

The header shows the freshness of your holdings data. Tap **刷新** or **同步** to fetch the latest prices before asking about your portfolio.

9. Settings

Access Settings via the **gear icon (⚙️)** on the Home screen.

DeepSeek API Key

- **已配置** (green dot): Key is saved and ready
- **未配置** (red dot): No key configured — AI features are disabled

Paste a new key to replace an existing one. Tap **清除** to remove it.

Data Export

OBSIDIAN VAULT EXPORT (RECOMMENDED)

Exports all your trades, thoughts, and reviews as individual Markdown files in a structured zip archive with YAML front-matter and bidirectional links. Import into Obsidian or any Markdown-based system for long-term archiving and analysis.

Tap **导出 Vault** → **保存到 Google Drive 等** and choose where to save the zip file.

JSON BACKUP

Exports the complete raw database as JSON — useful for migrating to a new device or keeping a backup. Tap **导出 JSON 备份** and share or save the file.

Your in-app data is never deleted by an export. The export creates a separate copy.

Privacy

- All journal data stays in local SQLite — nothing is uploaded to any server
- DeepSeek only receives relevant excerpts of your journal when you ask a mentor
- Yahoo Finance only receives the ticker symbols of your holdings
- Voice input is handled by your Android system keyboard — not by this app

Danger Zone

清空与导师的聊天记录 permanently deletes all mentor chat history across all masters. This requires two-step confirmation and cannot be undone.

10. Tips & Best Practices

1. **Write before you trade.** The reason field is most valuable when filled in *before* executing the trade, not after. The app is designed for pre-trade journaling.
 2. **Capture your emotion honestly.** Logging "Fearful" when you felt fearful is more useful than logging "Calm." The AI mentor uses emotional patterns to give you better feedback.
 3. **Use Your Mentor for patterns, specific masters for frameworks.** "Your Mentor" gives context-rich personalised feedback. Switch to Peter Lynch or Buffett when you want a specific philosophical lens applied to a decision.
 4. **One thought per dilemma.** When you're unsure about something, log it as a 心念 (thought) immediately — even a sentence. You can elaborate later and ask any mentor for their view.
 5. **Run the strategy report monthly.** After your monthly review, regenerate the strategy profile report. The gap between your stated philosophy and your actual trades often reveals your most important blind spots.
 6. **Export to Obsidian regularly.** The Vault export creates a permanent, searchable archive of your investment thinking. Your notes compound over time.
